MIKOS-101

AMENDMENT WITH RCE

07650001aa

Amendment dated 07/27/2006

Reply to office action mailed 01/27/2006

The following is a complete listing of all claims in the application, with an indication of the status of each:

Listing of claims:

1	1. (currently amended) System for authenticating digital information,
2	comprising:
3	a) an image acquisition device for producing an original array of
4	two-dimensional digital information;
5	b) means for obtaining current date and time information from satellite
6	or radio broadcasts;
7	c) means for obtaining current location information from satellite or
8	radio broadcasts;
9	d) means for identifying a Sensor ID for the image acquisition device;
10	e) an encoder for converting date/time, location, and Sensor ID into
11	two-dimensional format called the Encoded Data Array;
12	f) an embedder for combining the Encoded Data Array and the
13	Original Array into a new Composite Array
14	h) a Transmission device to transfer the Composite Array to a
15	recipient;
16	n) means for comparing said transferred Composite Array to said
17	Encoded Data Array, said comparing means thereby being able to use said
18	Encoded Data Array to determine whether the information in said Encoded
19	Data Array is embedded in said Composite Array, said comparing means also
20	being able to separately determine whether said date/time information, said
21	location information, and said Sensor ID information is embedded in said
22	Composite Array, said comparing means being further limited by being able to

MIKOS-101	AMENDMENT WITH RCE	07650001aa
Amendment dated 07/27/20	06 Reply to office	action mailed 01/27/2006

23	make said determination without extracting or otherwise decoding the
24	information in said Encoded Data Array;
25	j) a decoder with fault indicator when date/time, location, and source
26	cannot be decoded;
27	k) an Encoding Extractor for removing the Encoded Data Array from
28	the Composite Array;
29	l) means for restoring the Original Array at pixel locations used for the
30	Encoding; and
31	m) means for determining changes between the Restored Original
32	Array and the Original Array.
1	2. (previously presented) System as in Claim 1 in which the Original Array
2	size is increased by a factor and subpixels are used in steps f, h, n, j, k, l, and
3	m.
•	
1	3. (previously presented) System as in claim 20 in which the encryption of
2	step g and decryption of step i is repeated more than one time.
1	A (considerable consents I) S. et al. (Cl.) A set al. (Cl.)
1	4. (previously presented) System as in Claims 1 or 2 in which the encryption
2	process involves scrambling the pixels or subpixels.
1	5. (previously presented) System as in Claims 1 or 2 in which steps b and c
2	utilize the GPS (Global Positioning Satellite) system.
	- · · · ·
1	6. (previously presented) System as in Claims 1 or 2 in which the Decoder
2	utilizes flash correlation to select pixel locations of the Encoded Data Array
3	and test for authenticity.

_4.

MIKOS-101 <u>AMENDMENT WITH RCE</u> 07650001aa Amendment dated 07/27/2006 Reply to office action mailed 01/27/2006

- 1 7. (previously presented) System as in Claims 1 or 2 in which the Sensor ID 2 in step d includes a biometric identifier of the User of the image acquisition 3 device. 1 8. (previously presented) System as in Claims 1 or 2 in which the Sensor ID 2 in step d includes the serial number and odometer setting of the image 3 acquisition device of step a. 1 9. (previously presented) System as in Claims 1 or 2 in which the change 2 detector of step m evaluates subsections of the Restored Original Array and 3 the Original Array to localize areas of difference. 1 10. (previously presented) System as in Claim 6 in which flash correlation is 2 used to verify that the encoded data is the same as data which is expected to be 3 encoded into a particular Original Array. 1 11. (previously presented) System as in Claim 6 in which flash correlation is 2 used to identify the encoded data by exhaustive comparison against each 3 possible value for each of date/time, location, and source. 1 12. (previously presented) System as in Claims 1 or 2 in which date/time. 2 location, and source are annotated onto the Encrypted Composite Array.
- 1 13. (previously presented) System as in Claims 1 or 2 in which the encoded data provides the key to the encryption and decryption algorithms.

	MIKOS-101	<u>AMENDM</u>	ENT WITH RCE	07650001aa
	Amendment	dated 07/27/2006	Reply to office action	
1	14. (previously presented) Syst	em of Claims 1 or 2 in which	ch the operation of
2	the in	nage acquisition device is t	riggered by the change of st	atus of another
3	devic	e.		
1	15. (original) System of Claim	14 in which the triggering d	levice is a face
2	recog	nition system.		
1	16. (6	original) System of Claim	14 in which the triggering d	evice is a speed
2	senso	r.		
1	17. (6	original) System of Claim	14 in which the triggering d	evice is an alarm
2	condi	tion sensor.		
1	18. (g	previously presented) Syst	em of Claims 1 or 2 in whic	h the Encoding is
2	perfor	med by overlaying a patter	n of pixels of a particular co	olor or grey scale
3	value.			
1	· 19. (p	oreviously presented) Systo	em of Claims 1 or 2 in which	h the Encoding is
2	perfor	med by steganography.		_
1	20. (p	previously presented) System	em of Claims 1 or 2, further	comprising:
2		g) an encrypter for encryp	oting the Composite Array;	
3		i) a decrypter to restore the	ne Composite Array.	
1	21. (c	urrently amended) A meth	nod for authenticating digital	images,
2	compr	ising the steps of:		_
3		capturing a digital image;		

-6-

MIKOS-101 <u>AMENDMENT WITH RCE</u> 07650001aa Amendment dated 07/27/2006 Reply to office action mailed 01/27/2006

4	recording authentication information at the time and place of said
5	capturing, said authentication information being unique to said digital image
6	and comprising a plurality of pieces of information, including at least one
7	piece of information from a source independent of said capturing;
8	encoding said authentication information into a data array mapable to
9	said digital image;
10	mapping said data array to said digital image, thereby creating a
11	composite array;
12	optionally encrypting said composite array;
13	optionally annotating said composite array;
14	comparing said data array, optionally encrypted and annotated, to a
15	target composite array, wherein said comparing determines whether said
16	authentication information is embedded in said target composite array, said
17	comparing also being able to separately determine whether each of said
18	plurality of pieces of information is embedded in said target composite array,
19	said comparing being further limited by being able to make said determination
20	without extracting or otherwise decoding information in said data array,
21	thereby proving that said target composite array is an authentic copy of said
22	composite array.
1	22. (original) The method of claim 21, wherein said at least one piece of
2	information from a source independent of said capturing is GMT time
3	information.
1	23. (original) The method of claim 21, wherein said at least one piece of
2	information from a source independent of said capturing is GPS location
2	information.

MIKOS-101	AMENDMENT V	<u>VITH RCE</u>	07650001aa
Amendment dated 07/27/20	006 R	eply to office action mailed	101/27/2006

1	24. (original) The method of claim 21, wherein said at least one piece of
2	information from a source independent of said capturing is GMT time
3	information and GPS location information.
1	25. (previously presented) The method of claim 21, wherein said comparing
2	. •
2	step is flash correlation of said data array with said target composite array.
1	26. (previously presented) The method of claim 25, wherein said digital
2	image is a sequence of digital images, there being a unique set of
3	authenticating information for each digital image in said sequence and a
4	corresponding unique data array, there being a unique composite array
5	corresponding to each digital image in said sequence, wherein said composite
6	array is a sequence of composite arrays and said target composite array is a
7	sequence of target composite arrays, and wherein said flash correlation
8	determines whether said sequence of target composite arrays is an authentic
9	copy of said sequence of composite arrays.
1	27. (previously presented) The method of claim 26, wherein said sequence of
2	digital images is a video image and said flash correlation is done in real time.
1	28. (currently amended) A system for authenticating digital images,
2	comprising:
3	means for capturing a digital image;
4	means for recording authentication information at the time and place of
5	said capturing, said authentication information being unique to said digital
6	image and comprising a plurality of pieces of information, including at least
7	one piece of information from a source independent of said capturing;

-8-

MIKOS-101 <u>AMENDMENT WITH RCE</u> 07650001aa Amendment dated 07/27/2006 Reply to office action mailed 01/27/2006

8	means for encoding said authentication information into a data array
9	mapable to said digital image;
10	means for mapping said data array to said digital image, thereby
11	creating a composite array;
12	means for optionally encrypting said composite array;
13	means for optionally annotating said composite array;
14	means for comparing said data array, optionally encrypted and
15	annotated, to a target composite array, wherein said comparing determines
16	whether said authentication information is embedded in said target composite
17	array, said comparing means also being able to separately determine whether
18	each of said plurality of pieces of information is embedded in said target
19	composite array, said comparing means being further limited by being able to
20	make said determination without extracting or otherwise decoding information
21	in said data array, thereby proving that said target composite array is an
22	authentic copy of said composite array.
1	29. (original) The system of claim 28, wherein said at least one piece of
2	information from a source independent of said capturing is GMT time
3	information.
1	30. (original) The system of claim 28, wherein said at least one piece of
2	information from a source independent of said capturing is GPS location
3	information.
1	31. (original) The system of claim 28, wherein said at least one piece of
2	information from a source independent of said capturing is GMT time
3	information and GPS location information

-9-

MIKOS-101	AMENDMENT	WITH RCE	07650001aa
Amendment dated 07/27/20	006	Reply to office	action mailed 01/27/2006

- 32. (previously presented) The system of claim 28, wherein said comparing
 step is flash correlation of said data array with said target composite array.
- 1 33. (previously presented) The system of claim 32, wherein said digital 2 image is a sequence of digital images, there being a unique set of 3 authenticating information for each digital image in said sequence and a 4 corresponding unique data array, there being a unique composite array 5 corresponding to each digital image in said sequence, wherein said composite 6 array is a sequence of composite arrays and said target composite array is a 7 sequence of target composite arrays, and wherein said flash correlation 8 determines whether said sequence of target composite arrays is an authentic 9 copy of said sequence of composite arrays.
- 34. (previously presented) The system of claim 33, wherein said sequence of
 digital images is a video image and said flash correlation is done in real time.
